  - Daniel Kutik: Cornflower Blue

### Who Should Leave the Project?

These people made one touch on the Java section over 5 years ago:

- Leocadiotine
- Vyas
- Ali Waseem

---

## Useful Git Commands for this Lab

The more useful git commands for this lab were `git branch <name>` and `git clone <URL>`. Branch is great for creating a new branch and allows me to work parts of a project without affecting the main. Clone also great since it clones a remote repository into my local workspace with ease.
